PREMIUM CONVEYING **COMPONENTS**

ROLLERS

stations. The rollers produced by Rulmeca and CEMA. are manufactured according to all known

Steel rollers and Techno polymer rollers, national and international standards: ISO, with rubber rings for impact and return UNI, DIN, AFNOR, FEM, BS, JIS, SANS

TRANSOMS/FRAMES

- CARRYING: Fixed carrying troughing set
- IMPACT: Used in the load points
- RETURN: Fixed return sets
- SELF ALIGNING: Solve problems of belt misalignment thanks to the large central pivot bearing and guide rollers.

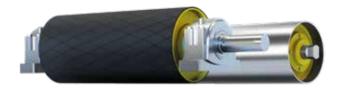

GARLANDS

The suspended garland sets are important Suspended garland sets are quickly and components that assure ample movement straight forward installation and maintenance. down the plant.

simply installed, and allow maintenance to possibilities and at the same time grant a fast, be performed on them without shutting

PULLEYS

the highest quality in a production process overall lower cost of ownership. employing advanced technologies.

Rulmeca designs and manufactures light Rulmeca pulleys minimize noise and vibration and heavy duty pulleys, using materials of as well as contribute to a longer belt life for

CLEANERS

The cleaning equipment is used to Hard steel scrapers and polyurethane assure the general plant efficiency and to cleaners are well known for their efficiency, reduce the periods of service needed for for ease of installation, for their project simplicity and economy of use.

COVERS

protect belt conveyors and contain dust and corrugated galvanized sheet steel).

Rulmeca covers fulfill the requirement to noise (available in pre-formed PVC and in

ABOUT RULMECA

GLOBAL PRESENCE AND LOCAL SERVICE

Founded in 1962, the Rulmeca Group has grown to be a leading partner to the global materials handling industry. Rulmeca Group is one of the world's largest suppliers of rollers, Spain / Portugal idlers, pulleys and motorized pulleys for heavy duty belt conveyors for quarries and mining United Kingdom applications and of Rollers, Drum Motors and 24V Drive Rollers for Intralogistics.

Group Headquarters: Rulmeca Holding S.p.A. Via A. Toscanini, 1 - I-24011 Almè (Bergamo) Italy Tel +39 035 4300 111 - export-it@rulmeca.com

BULK HANDLING

ROLLERS/IDLERS

MOTORIZED PULLEYS

SPACE SAVING DESIGN:

the drive unit and the bearings are mounted inside the Motorized Pulley shell so it takes up much less room than a conventional drive. Due to its compact size and smooth lines, quite often the Motorized Pulley is out of sight, because it is hidden within the conveyor frame.

NO MAINTENANCE:

it requires no maintenance other than the recommended oil change every 30.000 hours standard oil, 50.000 hours synthetic oil (almost 10 years considering 8h/day for 5 days working).

SAFETY:

the Motorized Pulley is probably one of the safest drives available because the motor is completely enclosed and the external shafts are stationary.

LOWER ENERGY COST (EFFICENCY):

the Motorized Pulley has a much higher efficiency from electrical motor to shell (pulley face) than conventional drives, because it has fewer frictional losses and therefore mechanical efficiencies up to 97% can be achieved. Energy savings up to 35% compared to conventional exposed-drive conveyors.

LOW NOISE:

thanks to the totally sealed enclosure and high-quality gears the Motorized Pulley runs almost at a whisper, reducing noise to minimal decibel levels.

Motorized Pulleys are available from Ø 138 mm to Ø 1000 mm, with a variety of lagging options to provide a durable drive with a long service-life. Totally enclosed: motor, gearbox and bearings are totally enclosed and sealed inside a steel shell. Motorized Pulleys have a safe and worry-free design that withstands the harshest conditions and reduces operating costs.

Motorized Pulleys are designed and manufactured according to the Explosion ATEX directive. Group II category 3D (for Dust) zone 22.

Stay ahead with the ability to make timely decisions! Revolutionary Remote Monitoring System (RMS) for conveyor components available for Rulmeca Motorized Pulleys MP500, MP630, MP800 and MP1000.

SOLUTIONS FOR ANY INDUSTRY

MINING, COAL AND LIGNITE

STEEL AND POWER **PLANTS**

RECYCLING, CRUSHING AND SCREENING

SALT AND SUGAR **PLANTS**

CEMENT, QUARRIES AND TUNNELLING

materials require state of art products. Since its foundation in 1962, Rulmeca, headquartered in Bergamo (Almé), Italy, has grown to become one of the world's leadingmanufacturers of conveyor rollers/ idlers, motorized pulleys, fabricated pulleys and other components for the bulk handling industry.

Todays movement of goods and bulk

1,300 employees in eighteen production and sales companies around the globe serve clients in 100 countries. Today, Rulmeca Group's global business incorporates the product brands Rulmeca, Precismeca, Melco and Douglas. All four of them specialized in the supply of long-lasting premium belt conveyor components. Rulmeca Group products are developed and produced to meet the most demanding challenges of all major bulk handling applications.

The close partnership with our customers, OEMs, engineering companies and end users confirms us as one of the most trusted brands in the industry. We have the expertise, the experience and the products you need, contact us.

PORTS, IMPORT AND EXPORT TERMINALS

PSV SERIES

Suitable for all Bulk handling applications. Shaft diameter range: from 20 to 50 mm Tube diameter range: from 63 to 219 mm

MPS SERIES

For light duty conveyors at high/medium speed. Shaft diameter: 15 mm Tube diameter range: from 50 to 102 mm

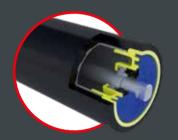

PL SERIES

For light duty conveyors in severe corrosive environments. Shaft diameter: 20 mm Tube diameters: from 89 to 140 mm

TOP SERIES

For light/medium duty conveyors in agressive and corrosive environments. Shaft diameters: 20 to 25 mm Tube diameter range: 89 to 133 mm

SUPREME SERIES

HDPE rollers with steel inner tube, for medium/heavy duty applications. Shaft diameters range: to 25 to 40 mm Tube diameter range: from 102 to 178 mm

DSK SERIES

For very heavy duty belt conveyors. Shaft diameters: from 50 to 90 mm Tube diameters: from 133 to 219 mm

BTR SERIES

Rulmeca belt tracking roller, solves severe misalignment problems without modification of the conveyor structure. Belt width range: from 500 to 1800 mm

IMPACT ROLLERS

With rubber rings and steel core, these rollers are designed to absorb the stress given by the impact of the material drop.

RETURN ROLLERS

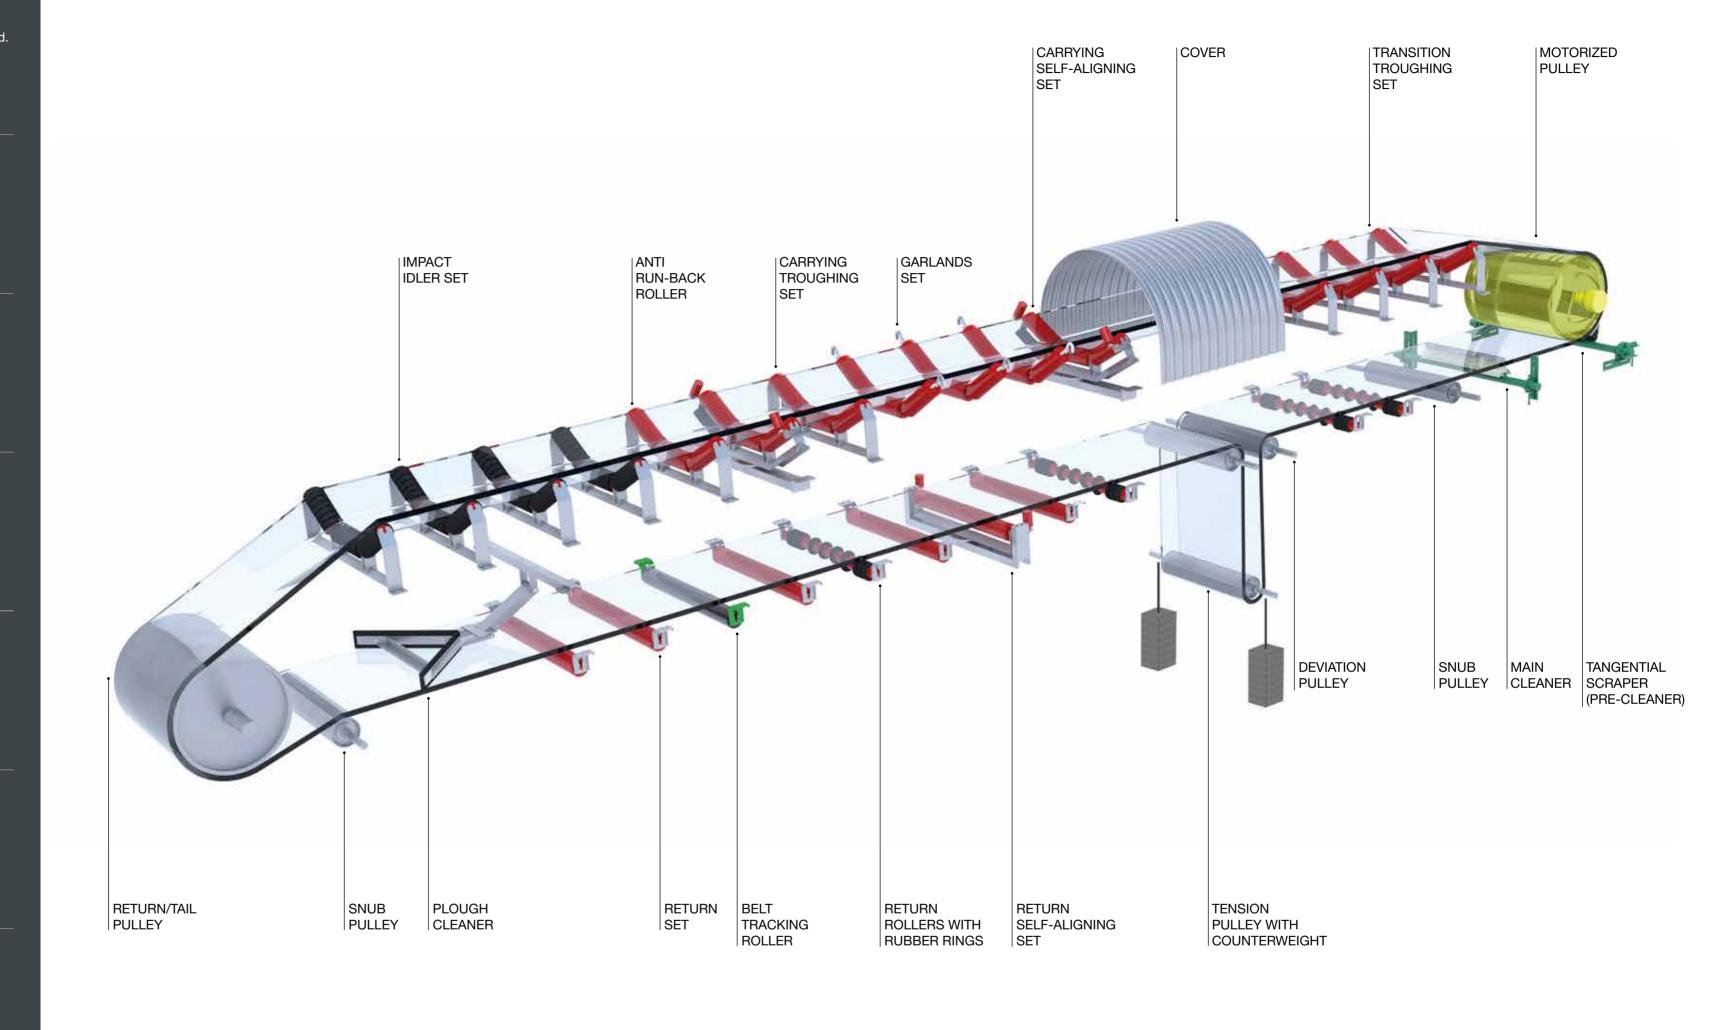

Return rollers contribute to eliminating the build-up of material, particularly present in the belt centre.

GUIDE ROLLERS

Guide rollers are composed of a base roller and are vertically mounted in pairs at the edges: their function is to limit the side-slip of the belt.
